What is Plan B One-Step®?
Plan B One-Step is emergency contraception that helps prevent pregnancy after birth control failure or unprotected sex. It is a backup method of preventing pregnancy and should not be used as regular birth control.

What Plan B One-Step is not.
Plan B One-Step will not work if you are already pregnant and will not affect an existing pregnancy. Plan B One-Step will not protect you from HIV infection (the virus that causes AIDS) and other sexually transmitted diseases (STDs).

When should I use Plan B One-Step?
The sooner you take emergency contraception, the better it works. You should use Plan B One-Step within 72 hours (3 days) after you have had unprotected sex.

Plan B One-Step is a backup or emergency method of birth control you can use when:
• your regular birth control was used incorrectly or failed
• you did not use any birth control method

When not to use Plan B One-Step.
Plan B One-Step should not be used:
• as a regular birth control method, because it's not as effective as regular birth control.
• if you are already pregnant, because it will not work.
• if you are allergic to levonorgestrel or any other ingredients in Plan B One-Step.

What Plan B One-Step is not.
Plan B One-Step is not a regular birth control method, and should not be used as a regular birth control method.

When not to use Plan B One-Step.
Plan B One-Step should not be used:
• as a regular birth control method, because it’s not as effective as regular birth control.
• if you are already pregnant, because it will not work.
• if you are allergic to levonorgestrel or any other ingredients in Plan B One-Step.

What is Plan B One-Step®?
Plan B One-Step is emergency contraception that helps prevent pregnancy after birth control failure or unprotected sex. It is a backup method of preventing pregnancy and should not be used as regular birth control.

How does Plan B One-Step work?
Plan B One-Step is one tablet with levonorgestrel, a hormone that has been used in many birth control pills for several decades. Plan B One-Step contains a higher dose of levonorgestrel than birth control pills, but works in a similar way to prevent pregnancy. It works mainly by stopping the release of an egg from the ovary. It is possible that Plan B One-Step may also work by preventing fertilization of an egg (the uniting of sperm with the egg) or by preventing attachment (implantation) to the uterus (womb).

Can I get the best results from Plan B One-Step?
You have 72 hours (3 days) to try to prevent pregnancy after birth control failure or unprotected sex. The sooner you take Plan B One-Step, the better it works.

How effective is Plan B One-Step?
If Plan B One-Step is taken as directed, it can significantly decrease the chance that you will get pregnant. About 7 out of every 8 women who would have gotten pregnant will not become pregnant.

How will I know Plan B One-Step worked?
You will know Plan B One-Step has been effective when you get your next period, which should come at the expected time, or within a week of the expected time. If your period is delayed beyond 1 week, it is possible you may be pregnant. You should get a pregnancy test and follow up with your healthcare professional.

Will I experience any side effects?
• some women may have changes in their period, such as a period that is heavier or lighter or a period that is early or late. If your period is more than a week late, you may be pregnant.
• if you have severe abdominal pain, you may have an ectopic pregnancy, and should get immediate medical attention.

Side effects may include changes in your period, nausea, lower stomach (abdominal) pain, tiredness, headache, dizziness, and breast tenderness.

If you vomit within 2 hours of taking the medication, call a healthcare professional to find out if you should repeat the dose.
